Rating reiterated

Reiteration of the '+1-iAAA/iA' Rating, Stable Outlook

Summary

- A robust economic environment is likely to support the Israeli banking sector, despite the global economic slowdown.
- We are expecting the price increases in the real estate sector to continue, albeit at a more moderate pace compared with the last 12 months.
- We reiterate the 'iAAA/iA-1+' rating for Bank Leumi le-Israel B.M. The outlook is stable.

The Rating Action

On July 26, 2022, S&P Maalot reiterated the 'iAAA/iA-1+' rating assigned to Bank Leumi le-Israel B.M. The outlook is stable.

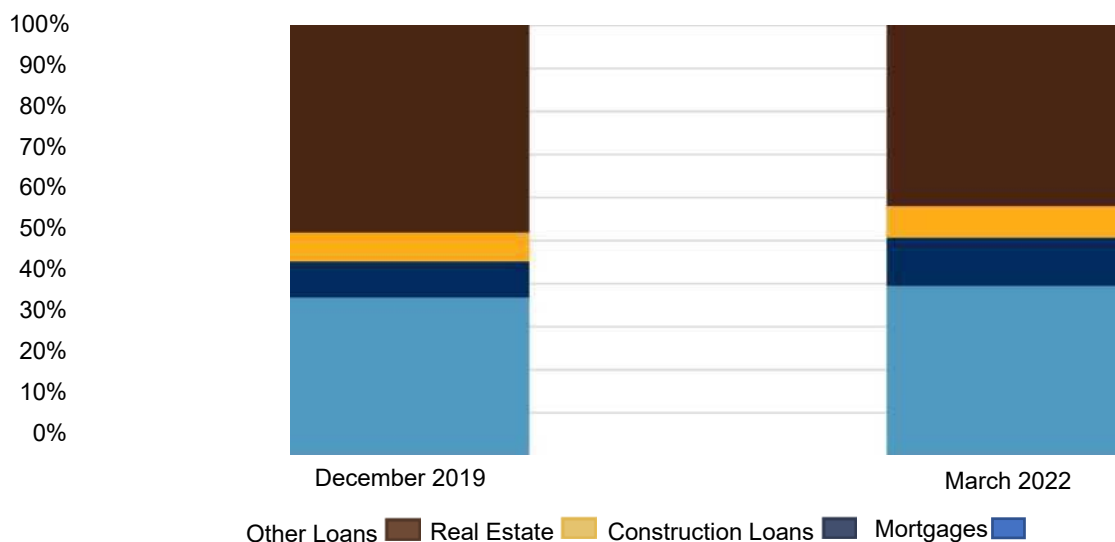

Main considerations

The economic conditions continue to support the banking system. Following the strong performance achieved in 2021, we are expecting the Israeli economy to remain generally robust, presenting a 5.5% growth in the GDP in real terms in 2022, despite the higher inflation and the Bank of Israel's more austere monetary policy. However, the recovery following the peak of the Corona pandemic and the favorable monetary policy supported the real estate prices, which increased by 10% in the last 12 months, in real terms.

The banking system's substantial exposure to the real estate sector presents a risk, but we believe this risk is still manageable. Against the backdrop of higher demand, Israeli banks expanded their credit portfolios by 14% last year. Most of the expansion was recorded in real estate-related loans, especially mortgages and construction financing loans, which comprise a substantial share of the bank credit in Israel. We continue to view the commercial real estate sector the most vulnerable. While offices and shopping malls demonstrated stability during the pandemic, there is still the risk of oversupply in the office sector, especially if demand in the high-tech sector slows down significantly.

The basis of the demand for real estate, driven by the population increase and limited supply, will continue to support price increases and credit volumes. However, we are currently expecting a slowdown in the market, because the higher interest rates, the high inflation, and the regulatory measures will encumber credit expansion and prices in 2022 and 2023. However, we expect the rate of increase in real estate prices to remain slightly above the 3% to 4% pre-pandemic average, and so, we are expecting a growing imbalance in the economy.

Chart 1: Credit to the Israeli real estate sector has grown in recent years

We believe the strict regulation and the banking system’s adequate loan and underwriting standards mitigate the risks that follow from the high structural exposure to the real estate sector. Hence, we expect that by 2024, credit losses will gradually return to their original pre-pandemic levels of 25 basis points of the total bank credit, and that most of them will generate from unsecured consumer credit to small businesses.

The higher interest rates and the continued demand on the business sector’s end will preserve the Israeli banks’ profitability and capital. The revenues will support the strong growth in credit observed in the past quarters, higher interest rates, and a large quantity of consumer price index-linked assets, supported by higher inflation. However, strong competition will diminish the spreads. Closing branches and manpower cutbacks will continue to help banks limit the growth in operating expenses, and the banks will continue to invest in digitization. We estimate that the robust profitability and the financial flexibility

to raise capital or lower dividends will help stabilize the capital basis in the next 12 to 24 months. This, despite the erosion of the capital cushion on top of the regulatory capital as a result of the strong growth in credit, the renewed dividend distributions, and to a lower extent, the repricing of assets, after the pandemic's peak.

The reiterated rating assigned to Bank Leumi reflects our view regarding the bank's strong financial flexibility, and the robust economy in which it operates. The bank has recently raised NIS 2.7 billion in equity, that will support our estimate regarding its strong equity basis. Also note that the improvement in the bank's income generation capabilities will help it enhance the risk-adjusted capital ratio (the RAC) to 10.4%-10.9% by the end of 2024, compared with 9.4% at the end of 2021. At the same time, we recognize that Bank Leumi's capital basis is more volatile than its competitors' because of a large long-term securities portfolio, which are estimated at market value, beside large-scale pension liabilities, that do not fully cancel each other out during interest rate changes. We expect the increase in credit, the higher inflation, and the higher interest rates to support the revenues.

8% of the total assets are linked to the Consumer Price Index, which will support the net interest revenues, that the bank estimates are likely to grow by 10.6%, following a 100-basis point increase in interest rates. The higher revenues will help absorb the increasingly higher costs, as the credit loss expenses will return to their pre-pandemic levels, aiming at 18 to 23 basis points on average per year, out of the total credit, by the end of 2024. We expect that the bank will distribute a dividend equal to 40% of its net profit in the next three years.

We are expecting that, like its peers, the bank's credit growth will even out, having been at 18% (gross) since the end of 2020. Most of the increase focused on the local real estate and construction sectors, which grew by 45% since the end of 2020, and as of the end of March of 2022, comprise 25.1% of the total local credit. We note that there is a risk related to the bank's exposures to real estate, but we recognize that the limited LTV (loan-to-value) ratio mitigates the risk.

The Rating Forecast

The stable rating forecast reflects our estimate that the bank will retain its strong equity basis, and that the risk-adjusted capital ratio will remain at over 10% in the next two years, and that the asset quality levels will stay at a similar level to the sector-wide average.

The downside scenario

The rating might suffer in the event of a material deterioration in the Israeli economy, especially in the real estate sector. Such a deterioration might follow from a sudden correction in the local real estate market, economic pressure because of the global economy deteriorating, or a major escalation in the regional geopolitical situation. We will also consider a rating downgrade if the bank cannot maintain its capital basis, for example because of growth in the credit portfolio, especially the real estate-related credit, that will exceed our expectations, and stress the capital or the risk profile.
